

SPACER II S

Single Head Automatic Screwing Machine

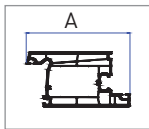

FEATURES

It performs the tightening of reinforcement steel screws used in door and window production. With a single press of the foot pedal, the profile and steel reinforcement are automatically joined together without the need for pre-drilling.

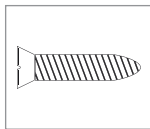

- Electric automatic screwing
- Automatic screwing with pressure-activated clutch
- Automatic stop after the screwing process is completed
- Automatically adapts to the profile height. No manual adjustment is required when switching between different profiles.
- Automatic profile clamping during the screwing process
- Double-sided conveyor
- Long service life of the screwdriver bit and easy replacement within 10 seconds
